

**ACID PICKLING AND SHOT BLASTING OF STAINLESS STEEL****Description**

Acid pickling is the removal of a thin layer of metal from the surface of stainless steel.

It is the proces used to remove the stains of thermo-coloration by the welding process of stainless steel parts, where the content of chromium has been reduced.

**General properties**

- Dull appearance, matt and homogeneous
- Clean and passivated surface
- Maximun corrosion protection properties

Application  
technology

Rack

**Uses**

It is specially recommended for parts produced in high volumes, for instance, bolts and nuts. Stainless steel parts of food, medical, construction and automotive industries

**THIS TREATMENT IS APPLIED DIRECTLY IN LINE OR IN COMBINATION WITH PREVIOUS AND SUBSEQUENT APPLICATIONS.**

**GALOL S.A. offers the possibility to reduce logistic costs between the different operations of manufacturing of the part.**
